The above is the Croquet Association of Ireland's Golf Croquet handicap table. It is used for calculating the required number of hoops based on two players' respective handicaps. To use the table, simply take one player's handicap on the vertical column, e.g., 10, and the other player's handicap on the horizontal row, e.g., 6, and find the intersecting square that tells you the hoop targets for each player, in this example 8:5. So, the player with the 10 handicap needs to reach 8 hoops before the 6 handicap player reaches 5 hoops.
